
FIRST-RUN WORKBOOK

A practical path from account readiness to a monitored MetaTrader 5 setup.

READ BEFORE YOU START

The approved Badshah AI Trading Bot file, supported settings and exact service URLs are not published yet. Use this workbook to prepare. Complete the release-dependent steps only when the actual release is available.

INSIDE

- 01 Account and risk readiness
- 02 Install and verify in MT5
- 03 First-run test and troubleshooting
- 04 Operating routine and trade review

02 / FIELD NOTES

01 / BEFORE YOU INSTALL

Start with the right account.

The bot offer requires an eligible PU Prime referral account. Broker account setup and identity checks happen directly with PU Prime. Badshah does not ask for your broker password here.

☐ **Read the risk and affiliate disclosure**

Trading can lose capital. Badshah earns referral commissions based on trading volume from accounts referred through us.

☐ **Confirm your PU Prime referral path**

Use the confirmed Badshah referral link. If your existing account is under another IB, ask PU Prime Support about the permitted process. A new link click does not itself move an account.

☐ **Identify the environment you will use**

Write down your demo or live account type, account currency and the exact broker symbol specification. Do not enter passwords or OTPs in this workbook.

YOUR PRE-FLIGHT NOTES

ACCOUNT TYPE (DEMO / LIVE)

ACCOUNT CURRENCY

SYMBOL AND BROKER SUFFIX

YOUR OWN RISK LIMIT PER TRADE

WHERE YOU WILL RUN MT5 (COMPUTER / VPS)

SAFE ACCOUNT SETUP

Open the broker account at puvip.co/la-partners/l43YHIV3. Never send broker credentials, OTPs or identity documents in chat.

03 / FIELD NOTES

02 / WHEN THE RELEASE IS AVAILABLE

Install deliberately.

Use only the approved .ex5 release and its exact instructions. The current public bot page honestly reports that the binary is still coming.

☐ **Get the approved release**

Read the release notes for supported MT5 version, symbol, suffix, timeframe and all required inputs.

☐ **Put the file in the correct terminal**

In MT5 choose File > Open Data Folder > MQL5 > Experts. Copy the approved file, then refresh Navigator or restart the terminal.

☐ **Sign in to your own PU Prime account**

Confirm the account and server visible in MT5 before attaching the bot. Do not submit an account ID to a website approval form.

☐ **Allow only documented connections**

In Tools > Options > Expert Advisors, allow the exact WebRequest URLs provided with the approved release. Do not guess or add unrelated URLs.

☐ **Attach and read its status**

Attach the bot to the documented chart. It checks eligibility remotely when it starts. A failed or unavailable check must not be treated as approval.

BEFORE AUTOMATED TRADING

Review settings, position size, loss limits, spreads, swaps and margin. Understand both platform-wide and bot-specific automated trading permissions. Learn how to stop automation and manage open positions yourself.

04 / FIELD NOTES

03 / OBSERVE BEFORE YOU RELY ON IT

A careful first run.

Follow the release-specific demo or test procedure when it becomes available. Verification is an access check, not a result guarantee.

☐ **Check the terminal connection**

Confirm that MT5 is connected to the expected PU Prime account and broker server.

☐ **Read the Experts and platform logs**

Look for initialization, permission and network errors. Do not bypass a verification failure.

☐ **Test the stop procedure**

Know how to turn off automated trading and who manages an open position after the bot stops.

☐ **Record what you observed**

Keep a note of the account type, symbol, settings, errors and action taken.

IF SOMETHING DOES NOT WORK

Bot missing from Navigator

Check the data folder for the MT5 terminal you are using. Refresh Navigator or restart MT5.

Trading disabled

Check both platform-wide and bot-specific automated trading permissions.

Verification fails

Check the signed-in account, exact documented WebRequest URLs and Experts log. Ask support if the issue persists.

Terminal disconnects

Check the Windows host, network and broker connection. A VPS also needs monitoring.

05 / FIELD NOTES

04 / STAY IN CONTROL

Write your operating plan.

An unattended terminal is still your responsibility. Set a repeatable review routine and a clear response when something changes.

BEFORE A SESSION

Confirm account and symbol, terminal connection, bot status, current settings, broker trading hours and your own risk limit.

DURING A SESSION

Monitor trade history, broker notifications and any terminal or VPS interruptions. Do not assume a quiet screen means all systems are healthy.

AFTER A SESSION

Record net result, whether you followed the plan, and one specific lesson in the trading journal.

MY CHECK-IN SCHEDULE

WHEN I CHECK THE TERMINAL

WHAT ALERT OR CONDITION MAKES ME PAUSE

HOW I STOP AUTOMATION AND HANDLE OPEN POSITIONS

06 / FIELD NOTES

05 / MAKE IT A PRACTICE

Turn trades into notes.

The free browser journal lets you record your plan, outcome and lesson, then export a CSV backup. Your records stay on this device until you export them.

TRADE DATE / INSTRUMENT / ACCOUNT TYPE

WHY THIS SETUP FIT MY PLAN

PLANNED RISK / STOP / TARGET

ACTUAL NET RESULT AFTER COSTS

DID I FOLLOW THE PLAN? WHAT WILL I REPEAT OR CHANGE?

THREE WEEKLY REVIEW QUESTIONS

- ☐ Which trades matched my written rules?
 - ☐ Did losses come from the setup, execution or a broken rule?
 - ☐ What one change will I test next week?
-
